

QUEENSLAND GAS COMPANY

PROJECT: SUPPLY, FABRICATION & INSTALLATION OF 40 GAS COMPRESSIONS AND ASSOCIATED INFRASTRUCTURE - 2006 TO 2010

LOCATION: SURAT BASIN, QLD

VALUE: \$30 MILLION

IN BRIEF

Commissioned by Queensland Gas Company (QGC) to undertake early field development works at the Berwyndale, Kenya and Codie Gasfields, located within the Surat Basin area of Queensland.

Contract works commenced in 2006 and continued until 2010 and comprised the supply and fabrication of structural steelwork, pipe spooling, supply of miscellaneous items and the installation, testing and commissioning of Field Compressor Stations (FCS) and Central Processing Plants (CPP). external fabricators.

CUSTOMER BENEFITS

Being contracted to supply and fabricate the structural steel component from our Workshop in Brisbane, delivery was fast-tracked and coordinated with the site installation schedule. This offered the client a seamless, cost effective and time efficient transition from fabrication off-site to installation on-site.

This freed up the client's procurement team from involvement and minimised the risk inherent in coordinating timeframes when dealing with external fabricators. The deployment of a professional management team complemented by highly skilled trades personnel and by offering direct interface between fabrication and installation units, all projects were delivered on time and on budget.

TECHNICAL FEATURES

Scope of Works – on-site installation of structural steel, mechanical items and pipe work, and pipe spool fabrication

Locations -

- Field Compressor Stations
- + Berwyndale South FCS FO1
- + Nangram FCS FO3
- + Codie FCS FO4
- + Kenya FCS FO2

Central Processing Plants:

- + Berwyndale CPP PO1
- + Kenya CPP PO2

Brown field works:

- + Sales Gas Skids SO1 and SO2
- + Personnel – site management, supervisory and engineering tradespersons, riggers, scaffolders and TA's
